# Water Samples Performed & Results Received (as of 2/27/2025)

## AIR EVALUATION

- Indoor Air Assessment

## SOIL EVALUATION

- Geo-probing
- Excavation/Soil Removal
- Passive Soil-Gas Assessment
- Visual Assessment/ Odor Investigations

## SUB-SURFACE GEOPHYSICAL INVESTIGATION

- Ground Penetrating Radar (GPR)
- Downhole Geophysics
- Electrical Resistivity Interpretation (ERI)

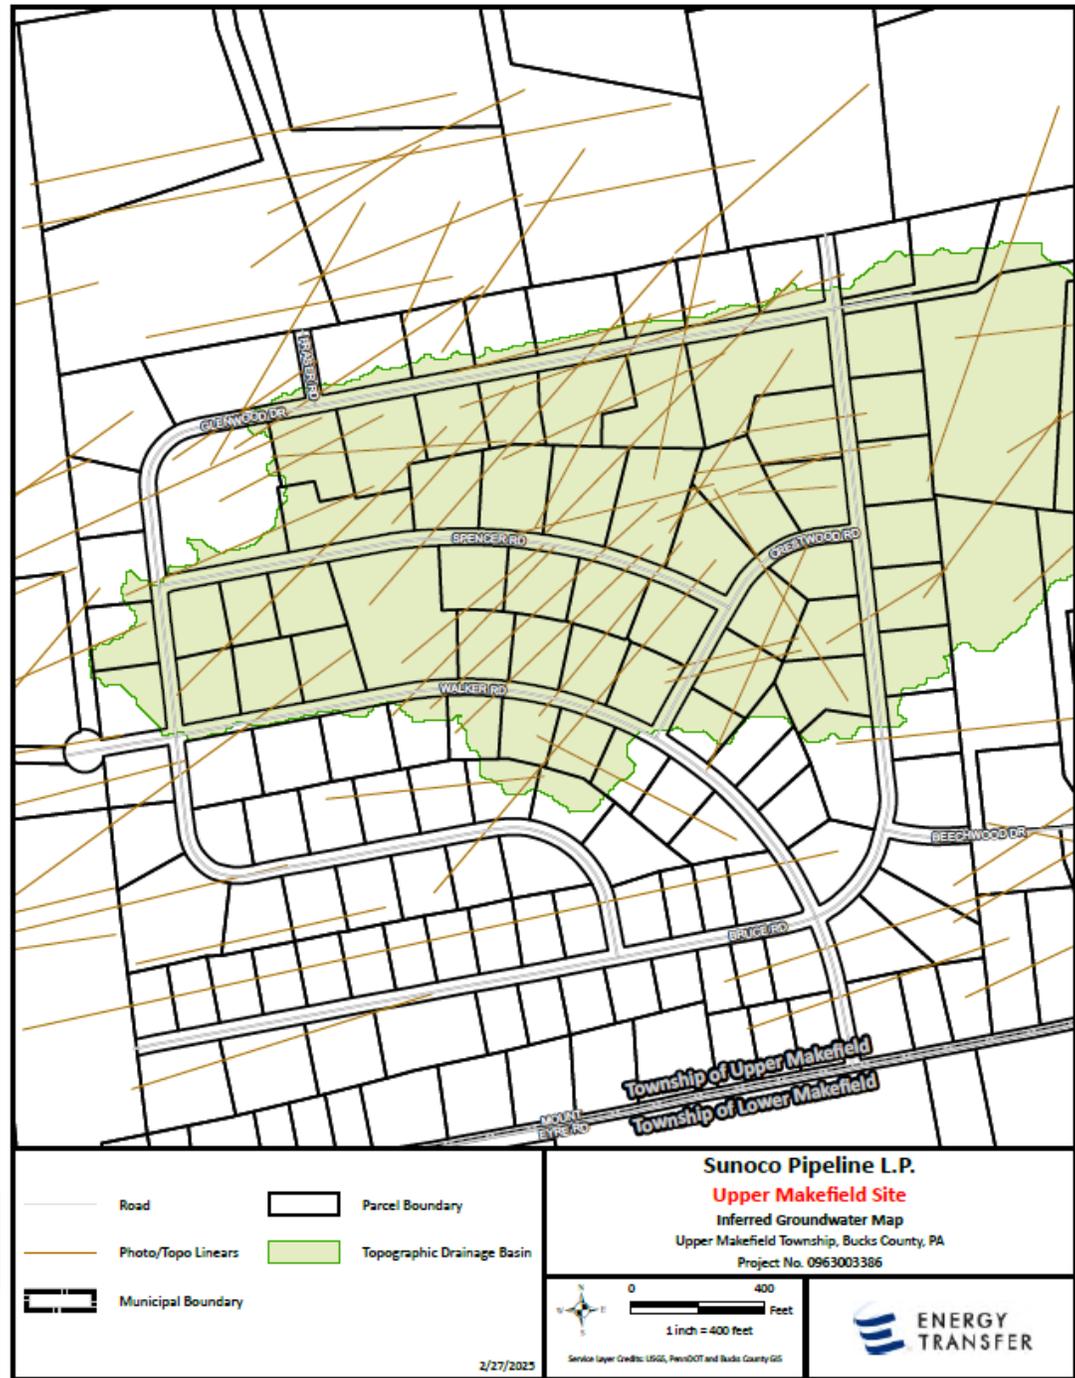

## WATER SAMPLING

- Water Sampling
- Well Headspace Screening
- POET Installation
- Visual Assessment/ Odor Investigations

## GROUNDWATER EVALUATION

- Well Gauging
- Product Recovery
- Packer Test
- Recovery Well Installation
- Monitoring Well Installation

The Makefield Household  
1234 Anystreet Road  
Yardley, PA 18977

Energy Transfer has been addressing a pipeline release confirmed on Jan. 31 that impacted several private wells in the Mt. Eyre neighborhood of Upper Makefield Township. Energy Transfer operates a 14-inch diameter pipeline nearby that carries petroleum products such as gasoline, diesel and jet fuel.

## Actions Taken

Over the past several weeks, our employees and third-party contractors have worked around the clock to address all aspects of the incident. This includes water testing for residents, providing bottled water, and the installation of carbon filtration systems to impacted homes and those within a buffer zone.

The section of the pipeline where the leak was detected was removed and replaced, and the pipeline was placed back into service following the review and approval of the Pipeline and Hazardous Materials Safety Administration (PHMSA).

At the request of PHMSA, the pipeline is currently operating at a 20% pressure reduction. Our investigation into the cause of the leak is ongoing, and we are confident the pipeline is operating safely, under PHMSA's daily oversight.

We have completed a series of digs at certain other locations to visually inspect the line. We have completed six digs total in Upper Makefield Township and Newtown Township collectively, under PHMSA's oversight, at previously repaired locations and have found no evidence of other leaks.

UPPER MAKEFIELD

consultants have performed more than 200 water tests for residents in the area and will continue these efforts. We continue to provide bottled water for concerned residents, which can be delivered or picked up at our Community Support Center.

## Water Filtration Systems

Energy Transfer's third-party water treatment consultants have begun to install Point of Entry Treatment (POET) systems, also referred to as carbon filtration systems, at certain homes in the investigation area. Energy Transfer is committed to covering the cost of the system appropriate for each home. Each system will be uniquely designed following individual site evaluations performed by certified and licensed third-party water treatment consultants.

## Remediation

Our crews are actively working to recover product from certain impacted wells and remediate the impacted area. The DEP continues to provide environmental oversight. Energy Transfer will continue to work with DEP for oversight of the remediation through the Act 2 process.

Additional information including upcoming public meetings, FAQs and other resources can be found below or by scanning the QR code.

## Comprehensive Water Treatment System Installation

### Energy Transfer is Providing Advanced Water Filtration for Mt. Eyre

In addition to continuing to perform water sampling throughout the Mt. Eyre neighborhood, Energy Transfer is offering to install water treatment systems to either remove, or prevent the introduction of, certain contaminants from entering the water being used and consumed in homes. Residents have likely heard these treatment systems referred to as "carbon filtration systems" in recent weeks.

Energy Transfer is offering to install Point of Entry Treatment (POET) systems for homes in the Mt. Eyre neighborhood that are located within the topographic watershed where the release took place, as well as an additional buffer area, as determined with the guidance of third-party environmental consultants. This area is referred to as the "Investigation Area." A map showing the Investigation Area is available [using this link](#).

Energy Transfer is offering to install a POET system on all homes located in the Investigation Area at no cost to a resident. Energy Transfer is also committed to funding maintenance and servicing of the POET systems that are installed in the Investigation Area for a minimum of ten (10) years. Additional information regarding the proposed POET systems, follow-up sampling, and maintenance and servicing of the POET systems is provided on the next page.

If you would like to install your own POET system and request reimbursement from Energy Transfer for that installation, please call 1-877-397-3383 or email us at [uppermakefieldresponse@energytransfer.com](mailto:uppermakefieldresponse@energytransfer.com).

# Future Meetings

- Proposed future community meetings via tele-townhall
  - March 10
  - March – TBD

# Next Steps

# Next Steps

- Continued water testing
- Installation of POET Systems
- Geophysics
- Environmental testing and short-term remediation
- Long-term remediation through PA DEP Act 2 requirements
- Operations and pipeline integrity work
- Commitment to continued community engagement
